Who performs what, level by level

blue: the automated driving system; grey: the human driver

	Sustained control	Monitoring the scene (OEDR)	Fallback	Domain (ODD)	Commercial status, August 2026
0	Driver	Driver	Driver	no feature ODD	Saturated worldwide
1	**System, 1 axis**	Driver	Driver	**bounded**	Mass-market commodity
2	**System, 2 axes**	Driver	Driver	**bounded**	Only tier at mass-market scale
3	**System**	**System**	Driver on request	**bounded**	Contracting; both German programmes withdrawn
4	**System**	**System**	**System**	**bounded**	Only level in at-scale revenue service
5	**System**	**System**	**System**	**unlimited**	**None exists anywhere**

What each step actually transfers: L2→L3 the monitoring (OEDR); L3→L4 the fallback; L4→L5 the domain restriction, which changes the form of the safety argument rather than the capability.
